

White Ring Frame - DOUBLE - adjustable for GU10 LED

Product code:

Reference: 91803

Technical specifications:

REFERENCE: 91803

Rated Power : MAX. 20W LED

Construction Material: Polycarbonate

Base: GU10 - MR16

Certifications: CE

Dimensions (mm): 173x92xH25mm

Cut-out Size (mm): Ø80x160mm

Product short description:

The **WHITE double adjustable square ring for two GU10 bulbs in polycarbonate** is an elegant and functional solution for interior lighting, while also allowing its installation in high humidity areas and coastal saltwater areas, as it does not deteriorate like metals. The design allows for adjusting the direction of the light, making it ideal for highlighting specific elements in a room or creating a pleasant atmosphere in any space. Super easy installation. It withstands coastal and high humidity areas without deteriorating as it is made of PC

Product description:

White Ring Frame - DOUBLE - adjustable for GU10

The double adjustable white ring for two GU10 bulbs is an elegant and functional lighting accessory designed to provide a flexible and precise lighting solution for interiors.

One of the main advantages of the double adjustable white ring for two GU10 bulbs is that it allows the use of two GU10 bulbs instead of one. This means you can get double the illumination compared to individual rings. If you need a greater amount of light in a specific space, the adjustable double ring will provide higher light intensity and a wider distribution of light. Additionally, being adjustable, you can adjust the direction of each ring to direct the light where you need it most, offering greater flexibility and versatility in illuminating your space.

The white adjustable double ring for two GU10 bulbs, made of PC (Polycarbonate), offers several advantages in its use in humid or coastal areas:

- Moisture resistance: The PC material used in the manufacturing of the ring has moisture resistance properties. This means it can withstand high humidity conditions without being damaged or corroded, making it suitable for use in areas with higher humidity levels.
- Corrosion protection: Being made of PC, the white ring is resistant to corrosion caused by exposure to saltwater in coastal areas. This allows it to maintain its appearance and functionality even in aggressive marine environments.
- Durability: The PC material used in its manufacturing is known for its durability and impact resistance. This makes the ring capable of withstanding adverse conditions such as strong winds, water splashes, or sand, typical in coastal areas.

This frame is specifically designed to accommodate up to two GU10 bulbs and dichroic LED modules, which can be easily installed and replaced thanks to its simple and secure fastening mechanism.

At FactorLED, we ensure that our products are of **QUALITY** and provide all the necessary elements for **DISTRIBUTION**, **IMPORTATION**, or **WHOLESALE**, including the technical specifications of each LED product.
