Product description:

Green Filter for LED Lighting

Our **filters** for **LED** lighting are composed of a dichroic filter which is formed by a transparent sheet. This transparent sheet has a reflective coating on one of its surfaces that reflects the light to be filtered. By varying the number and thickness of these layers, the filter can be adjusted to the desired shade.

These filters offer unparalleled color purity, stability and longevity, making them an ideal decorative solution. Importantly, they have an accurate and consistent color from batch to batch.

The green filter is particularly suitable for enhancing gardens, plants or simply as a decorative element.

They are sold in 1.22m x 0.5m, 1.22m x 1.5m or 1.22m x 1m lengths.

All filters are homologated.
